

# JailTracker

THE MOST TRUSTED NAME IN CORRECTIONS MANAGEMENT

## THE NATION'S LEADING JMS SOFTWARE

Modern Jail Management demands more from you than ever before. Especially when it comes to critical information flow. You need up-to-the-minute data on every inmate.

**Core Technology's JailTracker gives you real-time snapshots of cell movements, logistics, available resources, and budgets. You are able to communicate quickly and securely both internally and externally.**

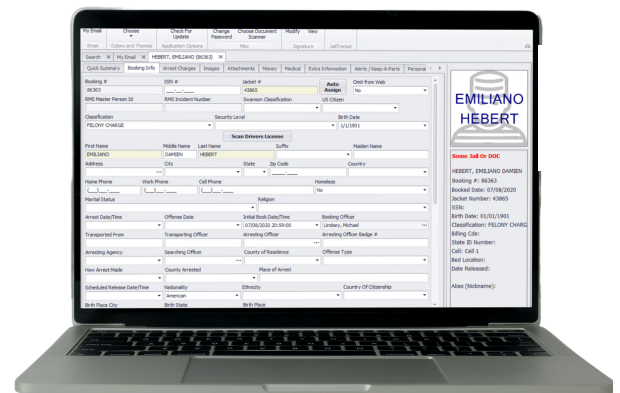

When an inmate first steps into your facility, JailTracker goes to work. Inmate information can be populated from multiple sources including mobile clients, RMS, JMS, Courts, and other sources. JailTracker can scan documents, images, provide access to medical records, facility information, and provides hundreds of reports.

## PROVEN, TRUSTED, DEPLOYED NATIONWIDE

JailTracker's cutting-edge technology is designed and constantly enhanced by our team with direct corrections experience.

With a few simple prompts, a single, shareable digital portfolio is built, detailing each inmate's case, education, work history, drug testing results, including all previous history in your facility — creating an easily accessible Inmate Jacket.

Demographics, contact information, in-jail event history, and more are maintained in JailTracker's Jail Management System (JMS) for each individual. This rich data resource is used to trigger alerts and notifications for items such as past suicide attempts or gang affiliations.

# KNOW MORE. CONTROL MORE.

## WORKFLOW

With the JailTracker workflow feature, agencies can create and configure a multitude of workflows based on specific tasks such as booking, releasing, and classification. Workflows (or wizards) are created as step-by-step guides to ensure appropriate data is collected.

## BOOKING INFORMATION

Inmate demographic and biographical information is collected under the booking information tab. Administrative users can require the completion of specific fields, assuring staff collects all of the appropriate information. Drop-down selection lists (with parent/child/priority functionality) ensure consistent information is selected, increasing data and reporting accuracy.

## ALL DIGITAL. TOTALLY CUSTOMIZABLE. FULLY MOBILE.

JailTracker's mobile application gives users the freedom to complete many job duties throughout the facility using a hand-held device. This application supports barcode scanning for functions like movements, cell checks, observations, and more.

## TECH SOLUTION FOR 40+ YEARS

Core Technology offers law enforcement a full suite of software products to ensure your information is current and easily accessible when you need it.

The solution that best fits your needs—and your budget—is just a phone call away.

## DISCOVER WHAT JAILTRACKER CAN DO FOR YOU.

## KEY FEATURES

- Virtual Greaseboard
- Total inmate tracking from intake to release
- Booking and release wizards
- Customized questionnaires for medical, classification, etc.
- Fully GAAP-compliant inmate accounting
- Mobile Application for Cell Checks, Head Counts, Observations and more
- Facial Recognition for accurate identification
- Paperless document imaging and e-signatures
- Auto-Notification to eliminate manual tasks
- Scheduling and program tracking
- Interfaces with inmate phone vendors, commissary, and many more.
- Provides over 600 reports and visual dashboards
